ERROR #5012:

Hello!

I have created a record map that I am going to use to parse a flat file coming into Ensemble. From there I am trying to send the parsed out data as emails to patients. I am getting this error when the Service tries to locate the file and send it through...it finds the file (as it states in the error message). So why does it say it does not exist?

15:16:09.420	ERROR #5012: File '/ens/mgr/interfacefiles/test/test22forOPBHSHAWD.txt' does not exist

Thanks for your insight!
