## Show the rating

Why can't I see the rating(stars) when I view posts in a group

<https://community.intersystems.com/group/developer-community-feedback>

None of the posts show their rating in this listing of posts. You need to click in to the actual post to see how it was rated. Shouldn't I see the rating of the post before I have to open it?

If I view just a general list of posts on the site(not sorted by groups)

<https://community.intersystems.com/find/post>

I can see the rating/stars per post in this list - before going in to an individual post.

Can this view/layout be applied to the group view of posts?
