Scalability and performance benchmark results from large scale systems

Often times support and sales engineers are asked about recent benchmark results on various platforms and large scale configurations. These will be made available here in the Developer Community in the "Documentation" section, and as an example here's a link to a recent Intel E7 v2 series processor benchmark.

<https://community.intersystems.com/documentation/data-scalability-intersystems-caché-and-intel-processors-0>

There are several reports available and more will be made available on an on-going basis.
