## Free edition of native source code management tool now available

Announcing [Deltanji 6.0](#), the latest version of the well-respected [George James Software](#) source control product formerly known as VC/m.

Deltanji comes in four editions, including Solo which is quick to install on Caché or Ensemble (2009.1 or later), easy to get started with, and perpetually free.

Deltanji runs within the environment whose code it is managing, integrating closely with Studio and Portal, and storing code versions in a CACHE.DAT database.

Please visit <http://georgejames.com/deltanji> to learn more and download the software.
