Atelier Syntax highlighting errors

There are still so many syntax highlighting errors in Atelier, which still exists from first beta public release.

$bitlogic(x1|x2) - doesn't understand logical operators

for { quit condition } - some time I see an errors with endless for

understand $ecode but do not understand short $ec

&html<<!--[if lte IE 9]><link rel='stylesheet' type='text/css' href='css/ie9.css'><![endif]-->> - shows an error in such line of code

#def1arg function(%args) "%args"

zzdump var

d {} while 0

UPD1 - 4th feb:

s Ptype=..PageType ##; this macro comment here marks as error

$v or $view and command View as well

; find global names - why word "global" highlighted different here in comment line

 set $bit(@BitCacheGN@(aIDHigh),aIDLow)=aBit

zk @TGN

#dim xpathResults As List Of %XML.XPATH.Result = ""

Property totalCount As %String [Calculated, SqlComputeCode = { s {totalCount}=##class({%%CLASSNAME}).GetTotalCount4SQL({%%ID})}, SqlComputed];

$$$Open("someObjectId").ReportQueue - here macros looks something like ##class(someClass).%OpenId(%id)

#Define Multiline(%a,%b,%c) ##Continue
    SET line1="%a" ##Continue
    SET line2="%b" ##Continue
    SET line3="%c"
ZQuit
