Announce: Java package to import XMLs/export as sources

Hello,

This package may be of interest...

Link: <https://github.com/litesolutions/cachedb-import>

I have programmed this over a hunch, in order to facilitate the retrieval of source code from a Caché installation. It makes use of the Java API provided by Caché.

Right now, I use it as a means to salvage sources in order to analyze them using the SonarQube plugin I develop for my employer. Unfortunately this plugin is not open source.

I am calling for help here, on two fronts:

- improve the code,
- obtain source samples to analyze!

[#Tools](#) [#Caché](#)
