No Namespaces found

Hello!

I'm trying to use iKnow but I get the following error "No iKnow-enabled namespaces found" in the Management Portal.

It was working on the 2015.2.2 version but now on 2016.2.0 it doesn't. I very new to Caché and iKnow so it's probably a simple problem.

I was able to create a iKnow domain using the terminal and I can view it in the learning portal (http://localhost:57772/csp/sys/exp/iKnow.UI.IndexingResults.zen_).

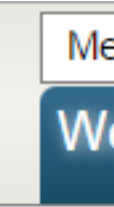

What can I do to make it work in Atelier? I've tried authenticating with SYS:SYS and USER:USER but neither seem to have any namespaces.

Very thankful for any help!

The screenshot shows a Windows-style dialog box titled "New Atelier Project". Below the title bar, the main heading is "Create a New Project". A red error icon is followed by the text "No namespaces reported by selected server". Below this, there is a "Project name:" label with a text box containing "Demo". A checked checkbox labeled "Use default location" is followed by a "Location:" label and a text box containing "C:\Users\Benjamin\InterSystems\Atelier\workspace\Demo". To the right of the location text box is a "Browse..." button. Below these fields is a section titled "Connection Configuration". It contains a "Server:" label with a dropdown menu showing "Myconnection". To the right of the dropdown is a "Configure server..." link. Below the server dropdown is a "Namespace:" label with an empty dropdown menu. At the bottom left of the dialog is a help icon (a question mark in a circle). At the bottom right are two buttons: "Finish" and "Cancel".
