No Namespaces found

Hello!

I'm trying to use iKnow but I get the following error "No iKnow-enabled namespaces found" in the Management Portal.

It was working on the 2015.2.2 version but now on 2016.2.0 it doesn't. I very new to Caché and iKnow so it's probably a simple problem.

I was able to create a iKnow domain using the terminal and I can view it in the learning portal (http://localhost:57772/csp/sys/exp/iKnow.UI.IndexingResults.zen_).

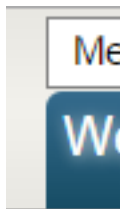

What can I do to make it work in Atelier? I've tried authenticating with SYS:SYS and USER:USER but neither seem to have any namespaces.

Very thankful for any help!

The screenshot shows a dialog box titled "New Atelier Project" with the subtitle "Create a New Project". A red error icon and message state: "No namespaces reported by selected server". The "Project name" field contains "Demo". The "Use default location" checkbox is checked, and the "Location" field shows "C:\Users\Benjamin\InterSystems\Atelier\workspace\Demo" with a "Browse..." button. Under "Connection Configuration", the "Server" dropdown is set to "Myconnection" and the "Namespace" dropdown is empty. A "Configure server..." link is visible next to the server dropdown. At the bottom, there is a help icon, "Finish", and "Cancel" buttons.
