Support for Gravatar user profile pictures

I noticed a lot of sites these days support use of Gravatar user profile pictures so your profile picture can follow you around from site to site, could we support this here?

<http://en.gravatar.com/>

Also there appears to be some HTML bug in the user profile edit page, when I click on the 'edit' tab I see options to edit the profile for a fraction of a second before this closes and I am unable to edit anything.
