## iFind index normalizing queries/deleting idex/TFIDF scores

In the documenations at this

location <http://docs.intersystems.com/enscomm20152/csp/documatic/%25CSP.Documatic...>, the normalize method applies normalizaion for text using the defined manguage and dictionary.

I want to normalize my iFind queries. How can I use the normalize method ? any code sample ?

I want also to delete properly the iFind index. Deleting all the rows in the table is sufficient ?

When quering iFind is it possible to get also TFIDF scores ? any code sample for this ?

Thank you for the help.
