Atelier equivalent of Studio add-ins?

In response to a comment on his posting about [source control hooks and Atelier](#) Bill McCormick used the example of Studio's SOAP Wizard and talked about providing more information about how Atelier will support this kind of extension.

My Atelier (1.0.116) has a Tools menu with an Add-Ins option and a "Soap Wizard" (sic) submenu.

Is there any information available to us yet about how we can add our own add-ins of this kind?
