Caché and Ensemble 2016.1

I am happy to announce the immediate availability of Caché and Ensemble 2016.1.

The highlights of 2016.1 are

- Significant improvements in JSON support
- Continued advances in SQL performance
- Database scalability improvements
- New REST services for DeepSee

These and other new features are summarized in this video introduction to 2016.1

For complete technical details of what's changed in 2016.1, review the Caché release notes and the Ensemble release notes.

The complete set of planned platforms, including specific point releases and/or patches, is detailed in the Supported Platforms Document. 2016.1 includes support for five new platforms. With this build (2016.1.0.656.0) all supported platforms are now available, except for OpenVMS. Availability for OpenVMS will be announced shortly.
