Problem after deleting class on the server

Version: 1.0.123

Cache for UNIX (Apple Mac OS X for x86-64) 2016.2 (Build 619U) Thu Mar 17 2016

After deleting a class on the server, Atelier still wants to believe it exists. I even deleted the project and the server. After re-creating them, it still believes the class exists. I log in with studio and it shows the class has been removed.

If I attempt to open the class in the server explorer, I get a null pointer exception, but I can open any other class.

Any thoughts would be appreciated.

James

I created another server with everything the same except for the name, and it no longer shows the deleted class. Something is cached somewhere that needs to get updated when the server is deleted (at a minimum).
