I/O Logged messages question

Hi -

I was looking at the “Purge Data Management” page, and one of the “Record Types” is the “I/O Log” which sometimes doesn’t clear when you purge all of the message.

But I’m not sure what it’s actually reporting as “I/O Log” messages (and I can’t find anyplace to view what is being considered I/O Logged Messages - so I can understand what’s happening)

Can anyone shed some light on these messages?
