## Global Summit 2016 - The Power of Handling Data Without a Schema

Presenter: Stefan Wittmann

Task: Take advantage of the NoSQL paradigm without adding another tool

Approach: Provide sample use cases that are an excellent fit for InterSystems ' new document data model

Description: Designing applications always requires you to make assumptions about your data model. Come to this session to learn how you can effectively handle the cases where you have to rapidly evolve your model. We will also discuss other use cases that are an awesome fit for the flexible document data model.

Problem: I ' ve observed the NoSQL landscape and like the direction, but I have no use-case that fits and I do not want to add yet another tool.

Solution: InterSystems now has support for a well integrated document data model that brings the NoSQL paradigm to the enterprise within your current stack.
