Global Summit 2016 - Tier 1 Applications in a Virtual Environment

Presenter: Murray Oldfield

Task: Deploy applications based on InterSystems ' technology using VMware.

Approach: Provide a checklist of factors to consider, particularly when deploying a production database application that requires high availability

Are you ready to deploy your applications on a virtualized architecture? This talk will highlight what you need to plan and do when deploying applications built on ISC data platforms using VMware. Special focus on what you need to know when planning for highly available (HA) production database applications.

Content related to this session, including slides, video and additional learning content can be found [here](#).
