Global Summit 2016 - System Sizing for Insanely Large Deployments

Presenter: Ray Wright

Task: Validate your performance and scalability claims, detect and correct bottlenecks, or determine the hardware needed to optimally run your applications

Approach: Discuss and demonstrate the use of our WebStress feature to design and run benchmark tests of your HTTP-based applications.

Conducting benchmark tests of your applications can help you highlight your performance and scalability claims, detect and correct bottlenecks in your application, and provide useful information about the hardware required to optimally run your solutions. Come to this session to learn about our “ WebStress ” feature that can help you design and run benchmark tests of your HTTP-based applications.

Content related to this session, including slides, video and additional learning content can be found [here](#).
