## Global Summit 2016 - Modern Full-Stack Development

Presenter: Danny Wijnschenk

Task: Build a development stack that enables state-of-the-art rapid development with a stable but adaptive back end.

Approach: Use InterSystems ' new document data model to achieve modern full-stack development

The MEAN stack is a very popular stack for building applications quickly that can change at a rapid pace. We will explore the benefits of such a stack and how you can tackle the requirements for modern and fast paced front-end development with support of a stable, but yet adaptive back-end using our new document data model.

Content related to this session, including slides, video and additional learning content can be found [here](#).
