Global Summit 2016 - LDAP: Beyond the Simple Schema

Presenter: Rich Taylor

Task: Use an LDAP schema that differs from the provided default

Approach: Give examples of customized LDAP schema development, using LDAP APIs and ZAUTHORIZE

In this session we explore the various options of for working with LDAP as an authentication and authorization framework. We will look beyond the simple LDAP schemas into working with more complex LDAP configurations that incorporate application level security information.

Content related to this session, including slides, video and additional learning content can be found [here](#).
