Global Summit 2016 - Introducing Personal Community v11

Presenter: Alex MacLeod

Task: Use Personal Community to build fully responsive and mobile-compatible portals

Approach: Demonstrate the new release of Personal Community. Provide a behind-the-scenes look at the new application development framework used to build it.

The new release of Personal Community v11 is now fully responsive and mobile compatible. It uses a new framework for development. In this session, we will give a functional overview of Personal Community, demo the new release and give a look behind the scenes into the application development framework used.

Content related to this session, including slides, video and additional learning content can be found [here](#). Please note that this content is available only to HealthShare customers and attendees of the Global Summit. On the learning web site you will be prompted for your Global Summit credentials to access this content.
