Global Summit 2016 - How Do I Connect IoT Devices?

Presenter: Michael Broesdorf

Task: Use the Internet of Things in a business application

Approach: Demonstrate incorporating device-generated messages into a business process, and using that information to trigger physical events

(Session Sequence: Dependent on EOPEN) IoT may be the most hyped idea of the year, but how do you actually make use of it in your business applications? This session gives a detailed demonstration of incorporating device generated messages into an business process, to interact with your business applications and triggering physical events as a part of a business process.

Content related to this session, including slides, video and additional learning content can be found [here](#).
