## Zen Mojo 1.1.1 released

I am happy to share the news that Zen Mojo 1.1.1 has been released. This release includes many improvements and bugfixes, the most important are:

- Multiple improvements for the offline bundle generation, e.g. subfolders are correctly copied to the target folder
- Optimizations for the dojo library, including a reduced load time by prepackaging required widgets into a single JS file
- The utility functions \$show and \$hide are now supported by the dojo and chart.js plugin
- Zen Mojo now stops event propagation by default. The default behavior can be overridden by the return value of the corresponding event handlers in the template

All upcoming Caché and Ensemble releases will ship with Zen Mojo 1.1.1.

You can download Zen Mojo kits from the WRC distribution page: <https://wrc.intersystems.com/wrc/Distribution.csp>
