SQL Parsing error

Found in:

- atelier-1.0.0AT.142.0
- Cache for UNIX (Apple Mac OS X for x86-64) 2016.2 (Build 636U) Wed Apr 13 2016 21:07:40 EDT

Breaks on FOR SOME when using a table reference:

```
Class User.SQLTest {  
    // Works  
    Query WithoutReference(pDomains As %List) As %SQLQuery(ROWSPEC = "RegistryID:%String") [ SqlProc ]  
    {  
        SELECT RegistryID  
        FROM    HS_Registry_Provider.Individual  
        WHERE   %Active=1  
        AND     FOR SOME %ELEMENT(%Domains)(%VALUE %INLIST :pDomains)  
    }  
  
    // Parse error  
    Query WithReference(pDomains As %List) As %SQLQuery(ROWSPEC = "RegistryID:%String") [ SqlProc ]  
    {  
        SELECT i.RegistryID  
        FROM    HS_Registry_Provider.Individual i  
        WHERE   i.%Active=1  
        AND     FOR SOME %ELEMENT(i.%Domains)(%VALUE %INLIST :pDomains)  
        ^  
    }  
}
```

Mismatched input '.' expecting R_PAREN
Press 'F2' for focus
