SQL Sequence

Does Caché support SQL CREATE SEQUENCE as in PostgreSQL?

If not, what would be the best alternative? Create my own sequence logic as the example bellow?

```
 Class Util.MySequence Extends %Persistent [ ClassType = persistent, ProcedureBlock ]
{

Property dummy As %String;

Property myvalue As %Integer [ Calculated, SqlComputeCode = { Set
{myvalue}=##class(Util.MySequence).CurrentValue()}, SqlComputed ];

ClassMethod CurrentValue() As %Integer
{
        s x=$I(^MySequence)
 Quit x
}

Method myvalueGet() As %Integer [ CodeMode = expression ]
{
..CurrentValue()
}

}
```

Thanks.
