How do I get existing CSP files into Atelier?

Hi -

After having seen how Atelier is working, I've decided to start learning/using Atelier for an existing project.

I've installed, and after a bit of poking around, I've managed to get a project that includes my classes, and they compile and such (these were all from an existing export), but I see that NONE of my .csp files came along despite being in the export file.

I'm trying to figure out what the planned strategy is for .csp files, since they already sort of live on the file system, I'm not clear either "how to get them into my project" or "how they are expected to be integrated with the Atelier view of stuff"

Can someone please walk me through the thinking here, so I can have all of my code (.csp included) into my working "pile-of-files"?

Thanks
