Documentation for transforms/mappings?

I was planning to fully map out all the transforms that incoming CCDs go through before they are displayed in the Clinical Viewer or sent back to another facility. When I opened the XSL files, I see some very good comments like the following:

```
<!--  
Field : Patient Name  
Target: HS.SDA3.Patient Name  
Target: /Container/Patient/Name  
Source: /ClinicalDocument/recordTarget/patientRole/patient/name  
StructuredMappingRef: ContactName  
-->  
<xsl:apply-templates select="hl7:patient/hl7:name" mode="ContactName"/>
```

This leads me to believe it was automatically generated or that there may be some generated documentation somewhere. If so, where can I find it?
