## Load a dll at run time

I am using java gateway imported/proxy classes and JG business service. I need to load a dll at run time.

I use System.loadLibrary/System.load when in java. I've tried \$ZF(-3," C: / Windows / System32 / pteidlibj.dll") and \$ZF(-4,1,"C: / Windows / System32 / pteidlibj.dll") but I'm getting <DYNAMIC LIBRARY LOAD> error.

How can I load a dll at run time using COS?
