
Question

[Michael \(Libert...](#) · May 9, 2016

When I try to debug I get an error

Configuration

Cache 2016.2 running on fully patched minimal CentOS 7 install. No Firewall.

Atelier running on Centos 7 Desktop. No Firewall.

I was able to build and compile classes from Atelier.

When I try to run a routine or some class code from Atelier I get an error. It tells me to look at the Network Activities view.

When I do that I see the following:

```

>>> Time:1462820586092 Server: debugger WEBSOCKET:featureset -n debugtarget -v APEX:^APEXINIT -i 1
Message:featureset -n debugtarget -v APEX:^APEXINIT -i 1
```

```
<<<!!! Time:1462820586162 Server: debugger WEBSOCKET:Unexpected error occurred:
ERROR #6704: Target has exited debugger Message:ErrorUnexpected error occurred:
ERROR #6704: Target has exited debuggerresponse: null
```

I'm wondering If I have something not set up correctly.
