## The simplest snippet to read from file in InterSystems Caché

Hi!

I believe the simplest is (to work with csv delimited by ";"):

```
set file = ##class(%File).%New( "data.csv" )
set sc = file.Open( "R" )
if $$$ISERR(sc) quit ; or do smth

while 'file.AtEnd {
    set str=file.ReadLine()
    for i=1:1:$length( str, ";" ) {
        set id=$piece( str, ";" ,i )
        write !, id // or do smth
    }
}
do file.Close()
```

Possible options:

different variants of error handling with sc code.

Embrace while loop into try/catch block.

And what's yours?
