HS.IHE.XDSb.Repository.Operations Operation Throwing error in HSBUS

Hi ,

In HSBUS we have out of box operation HS.IHE.XDSb.Repository.Operations to route CCD's from HSBUS to Edge gateway.

Earlier it was working fine, but for maintenance we have to rest the DEV environment, Now its throwing below error. I have verified all registry configuration and the CCD feed is also same, nothing is changed except reset. Can someone help me, where to look for this problem or what I am missing here.

```
[ERROR #6248: SOAP response is a SOAP fault: <Fault><Code><Value>SOAP-
ENV:Sender</Value></Code><Reason><Text xml:lang="en">Badly formed SOAP
Message</Text></Reason><Detail>
<error xmlns="http://www.intersystems.com/hs/hub/hsws">
<text>ERROR #6207: Unexpected SOAPACTION value:
urn:ihe:iti:2007:ProvideAndRegisterDocumentSet-b</text>
</error>
</Detail></Fault>]
```

Thank You,

Amit
