Database Collations: What are the difference between Spanish1, Spanish2, Spanish4 and Spanish5?

Hi everyone!

I am trying to choose the best collation for a new application that will be running on a spanish locale (Chile).

I can see there are database collations for Spanish1, Spanish2, Spanish4 and Spanish5. What is the difference between them? I can't find anything on our documentation. Should I simply choose the latest (Spanish5)?

Kind regards,

Amir Samary
