Isn't "Delegated" a supported Authentication Method for %Installer <CSPApplication> tag?

Hi!

I am trying to create a %Installer script and I noticed from our documentation that %Installer's <CSPAuthentication> will only accept:

```
<CSPApplication>
Optional; within <Namespace>. Defines one or more CSP applications; the supported aut
hentication flags are 4 (Kerberos), 32 (Password), and 64 (Unauthenticated).
```

Is "Delegated" authentication supported? What is it's code?

Kind regards,

Amir Samary
