Couple of glitches on Atelier's integration with server-side source control class

I'm pleased to see the new Source Control menu in the recent 1.0.165 build. This gives me access to the features of the same server-side source control class as Studio has always supported. It is particularly relevant for our [Deltanji](#) source control tool.

Our class makes use of CSP to serve up some dialogs through which the user controls the source control operation. Two observations so far:

1. In Atelier the window you display our CSPs isn't resizable. In Studio it is.
2. Atelier isn't detecting the page we send that's supposed to close the dialog. This works in Studio, but in Atelier the window remains and shows the following:
