Infusing SVG into a pdf document...

Hello there Intersystems Developer Community,

This year while at the Global Summit, I came to learn of a component that Stephen Morrison of Intersystems had written that was capable of infusing SVG content into a PDF document. Apparently Stephen was approached about this and was amenable to sharing the code with us as we have recently encountered a similar need. I'm hoping this post will lead to the sharing of this utility code, so that we can determine if it will indeed suit our need.

It is my impression that this code is maybe that being used to perform the print operation on a given widget from DeepSee?

Any detail that would be helpful in us adopting/trying it would also be welcome of course.

Thanks for your consideration,
  Jeff
