Runtime Expressions in XML

Hi.

I'm facing a problem when I try to use the Runtime Expression below inside the XData Contents:

```
<html>#($$$Text("Testing!"))#</html>
```

It compiles correctly, but when I open the page on the browser I get the message "Expression Error" instead of "Testing!".

How could I use the \$\$\$Text macro with Runtime Expressions? Is there a way to make this?

Thanks!
