New Developer Community release on June 7th with "Tag Summary" and "Compact" views

On June 7th we'll be releasing two new views of content that will allow you to rapidly see what's new on the site as well as identify content that has gone unanswered. The next step for this (after this release) will be to add in personalization so that you can filter content based on your tag and member "following" preferences. Here's a preview of the new views:
