## Ens.StreamContainer in Message Trace

Hello,

Why I don't see the full content of a XML file inside a Ens.StreamContainer Message?

When I look into the content I only see:

```
<?xml version="1.0" ?><!-- type: Ens.StreamContainer id: 5 -->
<StreamContainer><OriginalFilename>C:\Temp\In\aa.xml</OriginalFilename><Stream></Stream>
<Type>FC</Type></StreamContainer>
```

How I can see all the content? There is any setting to modify this behavior?

I am using a EnsLib.File.PassthroughService,

Regards
