Atelier bracket problem

We have noticed that when compiling with Atelier (either Atelier itself or sending the code through the REST interface) that the build will fail if all brackets '() {} []' are not closed. This includes brackets opened in comments.

For example, this will fail:

class myclass

{

//if someVar {

}

I do not know if this issue has been fixed or if this issue has been brought up, but it has been a nuisance over here.
