How to pass multiple values for a FILTER to DeepSee DASHBOARD on URL

I need to pass multiple values to a FILTER to a DeepSee DASHBOARD via the URL. The documentation seems to indicate this can be done, i.e.: "Where each filterspec is filtername.filtervalues" but there are no examples I can find that indicates what is used to separate multiple values. Say I want to pass the three values 5, 6, and 1395 to a filter. To pass just the 5 I know this works:

```
&SETTINGS=FILTER:LEAD.MYUSERID.H1.MYUSERID.5
```

but how do I include 6 and 1395. None of the following seem to work:

```
&SETTINGS=FILTER:LEAD.MYUSERID.H1.MYUSERID.5.6.1395
```

```
&SETTINGS=FILTER:LEAD.MYUSERID.H1.MYUSERID.5,6,1395
```

What is the proper syntax?

Thanks.
