Get variables list

Hello!

In Caché there is a way to print all current variables using write command without arguments:

```
USER>set Einstein = 1879
```

```
USER>set Mozart = 1756
```

```
USER>write
```

```
Einstein=1879
```

```
Mozart=1756
```

But is there a way to get a list of this variables? I am looking for something that would return value like \$LB("Einstein", "Mozart") for this case.

Thanks!
