## How to use <radioSet> and set its value

Hello,

I have a question about how to set the value of a radioSet. Yes, I know -- the documentation says that setValue can be used "client side", but gives no example. Plus, I'm trying to set the value of a radioSet in %onAfterCreatePage, which is a Zen method? Server side method? I'm not sure.

In my Zen page I create a radioSet like this:

```
<radioSet id="appRadio" name="appRadio"
displayList="App One,App Two,App Three"
valueList="One,Two,Three"/>
```

I want to select a radio based on a sepcific value, that I get from code.

e.g.

Method %OnAfterCreatePage() as %Status

```
set value = class.aMethodThatReturnsAValue() //e.g. "Two"
```

```
set %page.GetComponentById("appRadio").setValue(value)
```

Nope. That does not compile.

```
set %page.GetComponentbyId("appRaiod").value = value //?
```

Thanks,

Laura
