HIE Dashboard, where should I start? (without DeepSee)

If I wanted to build a web-based dashboard that monitored various HIE transactions where would I start?

Examples of measures would be Provide & Registers by Facility, Patient Views by facility or even PHR related data.

I have a successful POC that uses nodejs, html and SQL but I think it makes more sense to use Intersystems technology all the way around, I just don't know where to begin.

CSP for the web piece I assume? How would I access the data, for instance all P&R requests on the BUS? Any other tips or starting points? Maybe examples of a similar project?

We do not have a DeepSee license
