Enable \$\$\$GeneralError Macro

I am testing application code and want to simulate error conditions.

I am trying to use the following to define a custom error with a class method.

```
$$SYSTEM.Status.Error($$$GeneralError,"Any text here")
```

My class method code looks like this....

```
set RunStatus=$System.Status.Error($$$GeneralError,"DXL Testing Run Error")
```

Class compile fails because the \$\$\$GeneralError is unknown.

```
ERROR: DBMS.Reports.TaskPage.1(5) : MPP5610 : Referenced macro not defined: 'GeneralError'  
TEXT: set RunStatus=$System.Status.Error($$$GeneralError,"DXL Testing Run Error")
```

I expect I need to include something to enable the Macro.

Any suggestions are appreciated.
