
Question

[Kevin Furze](#) · Jun 26, 2016

when browsing the list of articlels, jump to top of page when new page is clicked

can I suggest a tweak to the functionality when browsing the list of articals,

when you click on a new page number / next page, the content change, but the position within the page remains at the bottom. It would make much more sense to display the next page of articles, and immediately jump back to the top of the page to continue reading.
