get DocumentId column from DocDM

Does anybody know how can I get the DocumentId property from a DocDM repository using SQL?. So far my SQL is like this:

```
SELECT name,email,gender FROM JSONTABLE(  
  'person',  
  '$' COLUMNS(  
    name VARCHAR(100) PATH '$.name',  
    email VARCHAR(100) PATH '$.email',  
    gender VARCHAR(2) PATH '$.gender'  
  )  
)
```

Thanks!
