Top from the group SQL query in Caché

Hi!

There is interesting question in Stackoverflow.

This query works for MS SQL:

```
SELECT *
FROM
(
    SELECT *, ROW_NUMBER() OVER (PARTITION BY client_id ORDER BY date_updated DESC) AS rn
    FROM client_address
) a
WHERE a.rn = 1
```

There is one answer there, which solves the task:

```
SELECT *
FROM
   client_address a
   LEFT JOIN client_address b
   on a.client_id  = b.client_id
     and a.date_updated < b.date_updated
WHERE
   b.client_id is null
```

But it goes with comment, that there are no Window functions in Caché SQL.

I wonder, are there any other options to make this query in Caché?
