Cell width in Deepsee

Is there anything in deepsee where i can increase the cell width?

	Column1	Column2	Column3
Sunday	100	200	300
Monday	100	200	300
Tueaday	200	300	400

By Default, based on the content, it calculates the cell width automatically.

From the above table i want to increase the width of weekdays cell particularly. Like below.

	Column1	Column2	Column3
Sunday	100	200	300
Monday	100	200	300
Tueaday	200	300	400

I have written MDX Query in Kpi.

I tried with %Label with their arguments for cell style. It doesn't work for me.

Please give me some suggestions.
