How to access routine

Hello, everyone!

I opened one project and there I found such lines as

```
$$Export^%occXMLExport(filename,"-d /diffexport",InternalName)
```

```
Do DecomposeStatus^%apiOBJ(sc,, "d")
```

The problem is I can't go to their definition and find them in documentation. It says that they don't exist on the server. However, the project works and these routines execute.

How can I import them into my project?
