Overriding soap body

We can override soap body by using WriteSOAPBodyMethod. Something like:

Method Online(ByRef Obj1 As myClass1, Obj2 As myClass2, Output ObjOutput1 As myClass1Output(XMLNAME ="Obj")) [..., WebMethod]

{

    ...

    s ..WriteSOAPBodyMethod="override"

    d (..WebMethod("Online","ProcessRequest")).Invoke($this,"Online",.Obj1,.Obj2,. ObjOutput1)

    s ..WriteSOAPBodyMethod=""

    ...

}

Method override(proxy As %SOAP.ProxyDescriptor, tag As %String)

{

    ...

}

In order to generate soap body, how can one access Obj1 and Obj2 from within the override method?

#SOAP #Caché
