How do I execute a "Basic Class Query)?"

Mike Kadow 18 July 2016
Caché, SQL

I have a Newbie Question.

I have been playing around with "Basic Class Queries."

I have defined a very simple "Basic Class Query." (see below)

However, I cannot find in the I/S documentation how to execute this query.

Any help is appreciated.

Class LastName.BasicClassQuery Extends LastName.Person
{
    Query Display() As %SQLQuery (ROWSPEC="ID:%Integer,Name:%String", CONTAINID = 1)
    {
        SELECT %ID, Name FROM LastName.Person
        ORDER BY DOB
    }
    Storage Default
    {
        <Type>%Library.CacheStorage</Type>
    }
}
